# Technical challenges

- Practise Enterprise online communication [ibfitetile@gmail.com](mailto:ibfitetile@gmail.com)
- Online purchases. Simulith centre always gave a quick response,
- Online communication – skype conference and Teams conferences ,
- 3D printing.

# How does it work?

A printer works by moving in all 3 directions, (X, Y and Z).

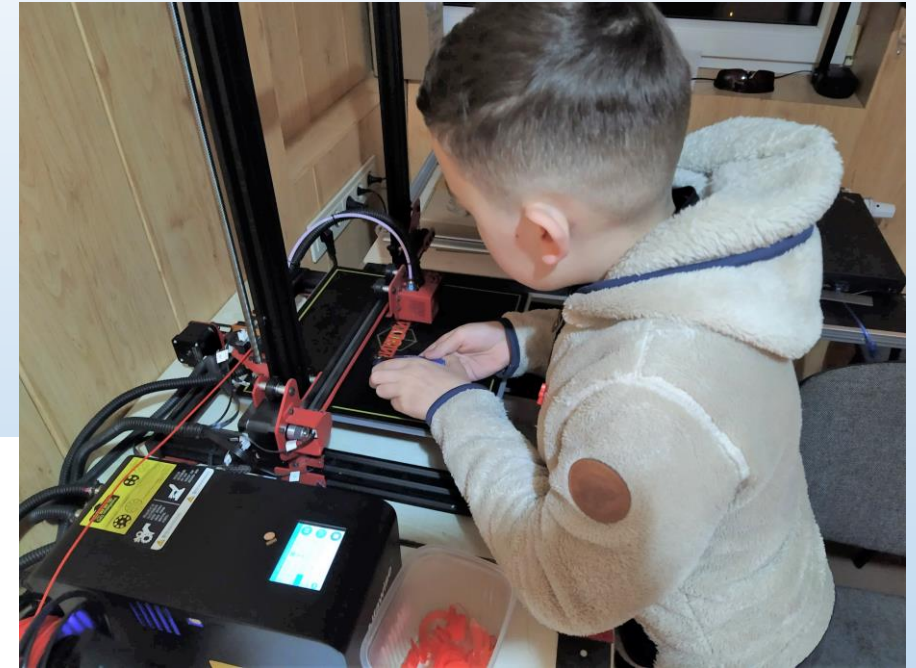

All of this is operated by the printer itself. To print something, you must get an SD card and put it into a slot. To have an actual print scheme, you use an online tool to make the design and then use Ultimaker Cura to turn it into the right format of file.

A simple object 60mm x 15-25mm x 3mm takes about 11 minutes to print with the printer heating up included.

# Sustainability

Is PLA environmentally friendly?

Poly lactide (**PLA**), is a renewable thermoplastic and a polymer. It is 'processed' from the starch of plants such as corn, sugar cane and sugar beet, making it **environmentally friendly** and sustainable. Fermentation of the sugars from these plants produces lactic acid and after further reactions, lactide forms.

## There is always a choice

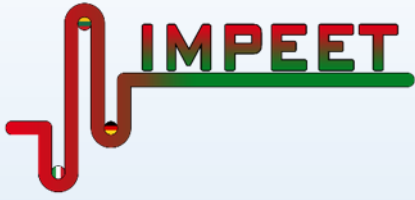

- IT section,
- Gained self-confidence and an entrepreneurial mindset,
- Responsibility while working in a team. I can find the way to mobilize resources,
- I will care for the environment.

- One of the key competencies which significantly improved during the Practice Enterprise was communication and cooperation, especially teamwork skills.
- “I understood how important our promises are. In a game or lesson, you can promise and forget, also be in a team and do nothing. Here, in our FITETILE, it is impossible. We found that it is important to say what you are really going to do, otherwise you stop the whole process going on.”

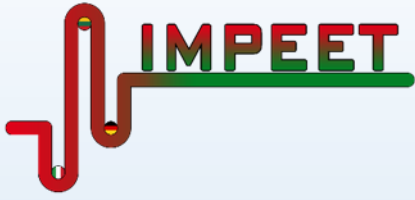

## Career education

- To include processes that help students to see themselves and others in order to achieve a common goal,
- The rotation ensures that every student can try different positions and working environments.
